

## ***Environmental issues and sustainable growth***

***Eco-management systems for institutions and companies***

## **Environmental issues**

- *Greenhouse effects and ozone depletion: climate change and natural emergency*
- *Hazardous substances leakage*
- *Availability and quality of water for human activities and life*
- *Local and regional pollution: pollutant localization issues*

**Global**

**Local**

# Greenhouse effects

- International effort
- Technology innovation
- Impact on legislations:
  - CFC & HCFC prohibition
  - Kyoto protocol on greenhouse gases (e.g. CO<sub>2</sub>)

# Ozone depletion

- International effort
- High technology research
- Impact on legislation:
  - CFC total prohibition
  - HCFC reduction
  - Impact on common life (spray, etc.)

# Water issues

- Domestic use
- Recreational use
- Industrial use

## Water and Life

- Pollution of rivers, lakes and sea
- Pollution of underwater resources
- Agricultural practices
- Chemical leakage

# Hazardous subst. leakage

- The Seveso accident and EC legislation (the Seveso directives):

- People troubles
- High risks regulation
- Emergency plans
- Public health and public information

## Pollutants localization

Regional impact

Local impact

## Long and short term

- Different timing of consequences
  - Long term = low level of pollution, chronic and slight disease: e.g. urban air pollution and respiratory disease
  - Short term = high level of pollution, intense and serious disease: e.g. Bophal or Seveso accident

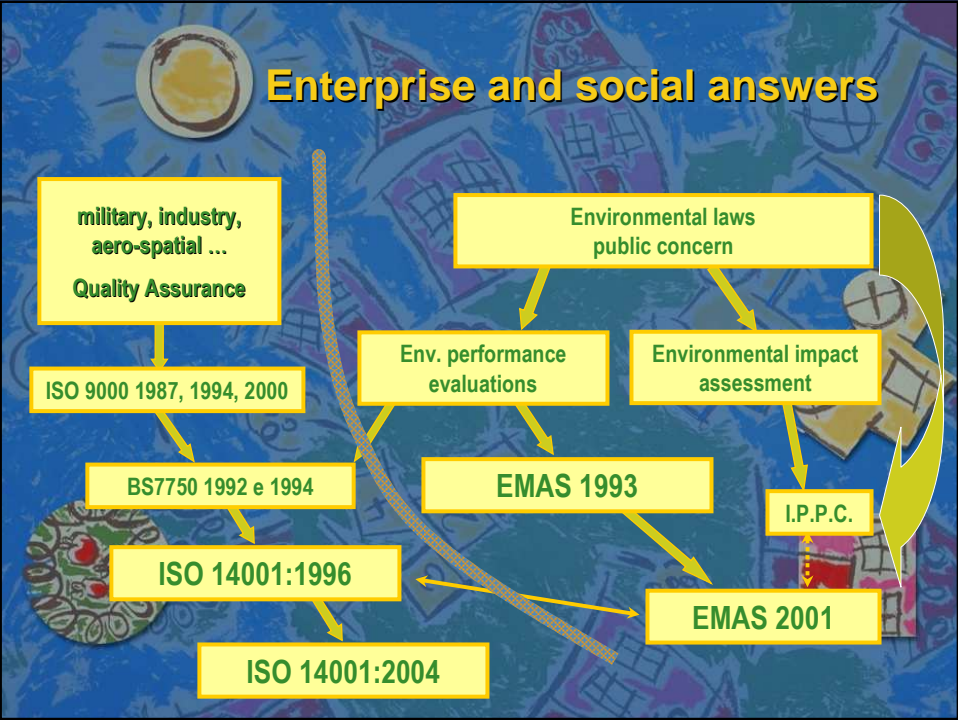

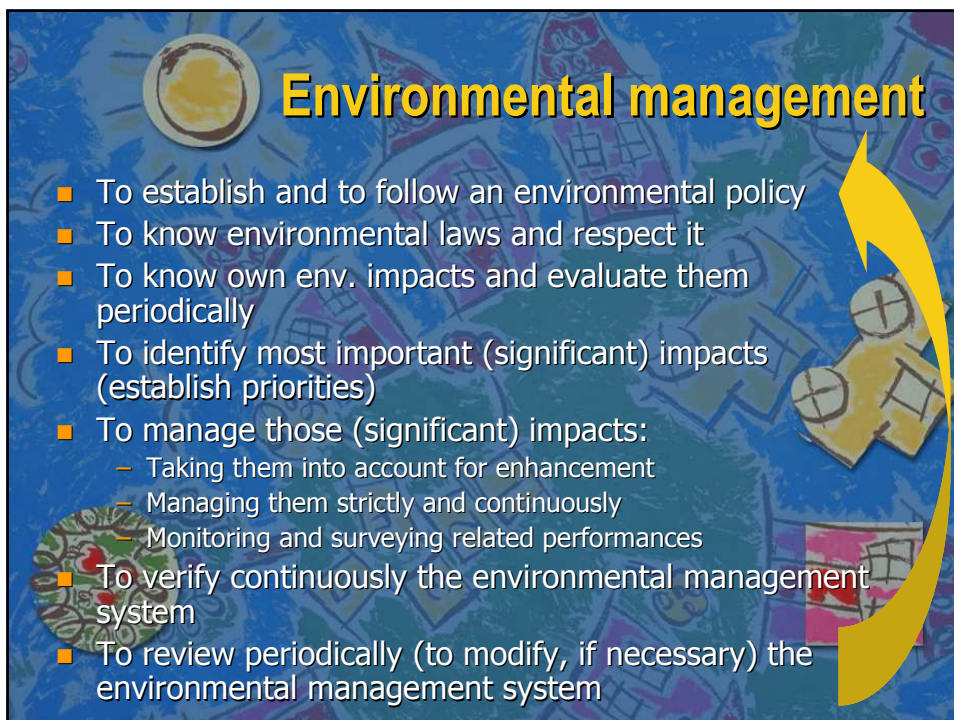

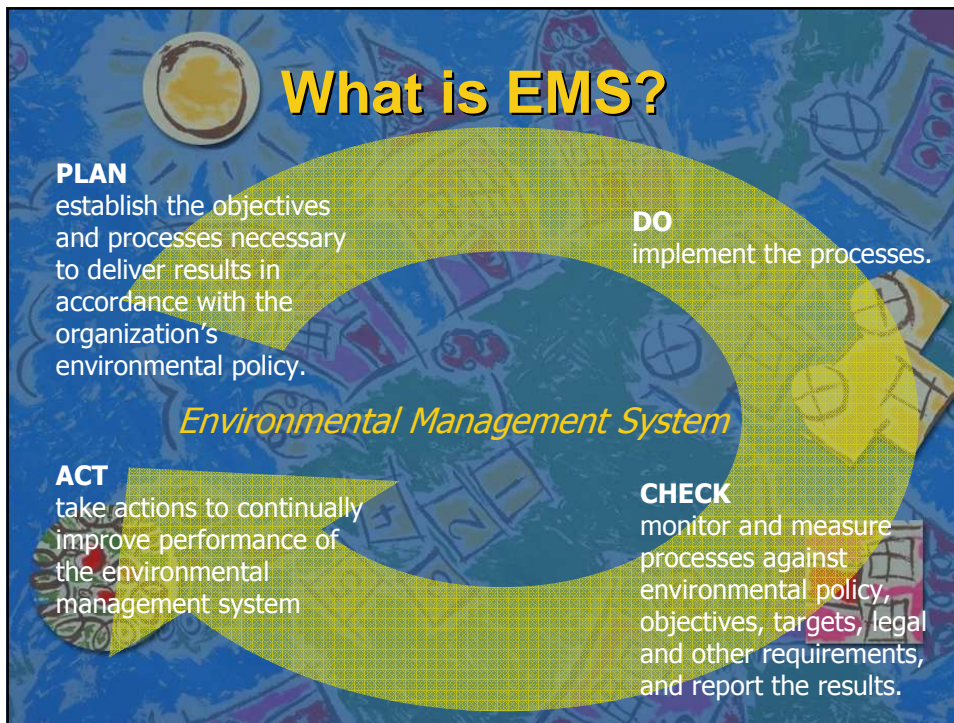

## Environmental pressures to firms

- Legal constrains
- Responsibility
- Public incentives & disincentives
- Market, consumers & products
- Public relations
- Cost reduction

**Actors (Stakeholder) ...**

- Owners & shareholders
- Local authorities
- customers and market
- employees

## Commitment and responsibility

- Top management commitment
- Responsibility
- Firms awareness of their own responsibilities
- Department level awareness ... involve all key-men
- Everyone to perform (top management, management, departments, all employees, suppliers)
- Clear target: to implement the environmental policy, to change processes, to enhance performances, to achieve certification
- Planning, scheduling, reporting

## Who uses ISO 14001 (*Emas*)? in Italy

- **Companies:**
  - ca. **5000** (*300*)
- **Public administrations:**
  - **81** (*17*) Local Authorities (municipalities, province, others)
  - **15** (*3*) Protected areas (nat./reg. parks, natural areas, etc.)

## Why ISO 14001/Emas?

- Management tool (companies)
  - To reduce environmental risks
  - To obtain competitive benefit
  - To enhance relations with local communities
- Land governance tool (Public Administrations)
  - To apply modern methodologies for governance
  - To enhance relations with citizens & entrepreneurs

## Why ISO/Emas certification?

- Managing the relationship of enterprises with the Environment
- Environment as an opportunity
- Environment as a driver of organizations and process re-engineering
- External acknowledgement of certification
- Periodic verification: **continuous improvement**

## Environment & Food

### The food context ...

#### Healthy eating!

- ✘ Pollution damages water, air, soils
- ✘ By consequence: agricultural productions, animals.

#### CONSUMER MORE SENSIBLE!

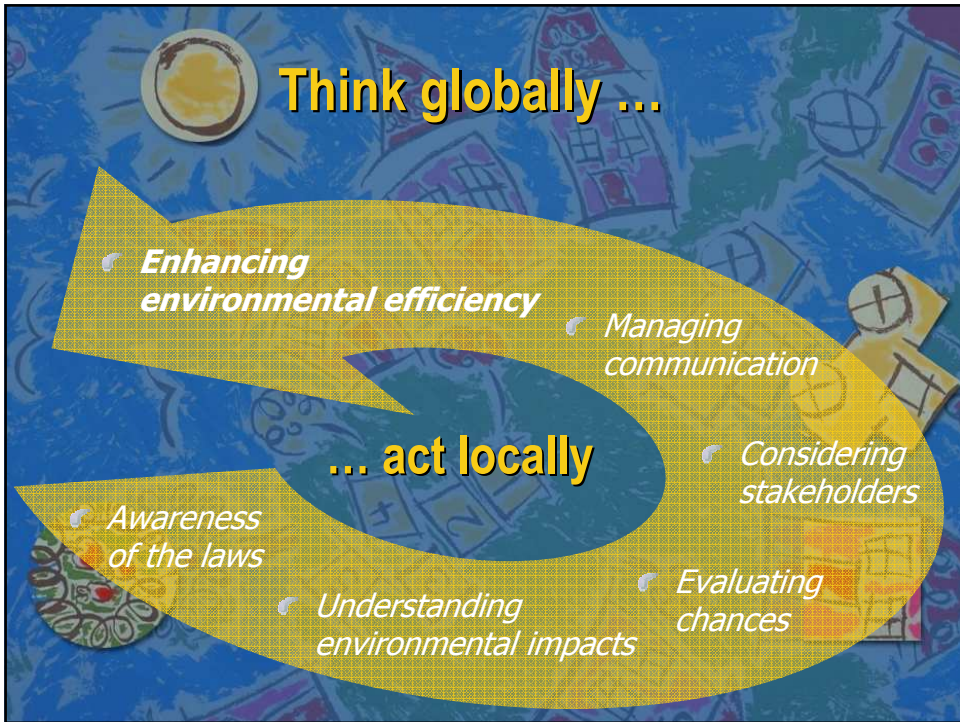

- ✘ Biological food
- ✘ Attention to labels
- ✘ Geographic denominations, etc. ...

## Environment, food, typical products and territory

- Development of sensibility for food quality, for “gusto” and for health of food
- Demand of typical products, with certified and guaranteed origin, interpreted as assurance of their quality
- Typical = territory relationship = territory development
- Promotion of typical products reinforce and enhance local economy, ... benefit to all stakeholders
- Work, prosperity, social sustainability

## Environmental quality ...

- Between demand and offer:
  - Demand **from** territory
  - Offer **to** territory
- Defining demand **from** territory
  - Identifying environmental priority
- Supporting offer **to** territory
  - Enhancing environmental impacts

## Call for synergy!

- Many enterprises should operate in the territory:
  - Adopting environmental criteria and/or management systems
  - Enhancing their own environmental performances
  - Co-operating for common benefit
- Local authorities should commit:
  - For common management of land and rural areas
  - For promotion of virtuous behaviour
  - For local development

**Call for synergy!**

Adopting standard languages and systems  
For the preservation of land  
For defence of economic wellbeing  
For sustainable growth!

**Call for synergy!**

Environmental management:  
a chance for  
**ENVIRONMENTAL NETWORK**  
between  
**ECONOMIC ACTIVITIES**  
&  
**TERRITORY**
